## INTRODUCTION

Removing the bottom lower case of your Toshiba Satellite device will allow you to access its inner components, such as the RAM. This will be useful for most repairs.

### 🔧 TOOLS:

- iFixit Opening Tools (1)
- Phillips #1 Screwdriver (1)

This document was generated on 2020-11-28 08:23:37 AM (MST).

## Step 1 — Battery

- Click button 1 to the unlocked position.

- (i) This button will have a 1 by it.

## Step 2

- Push and hold button 2 to the left.

- As you push button 2 to the left position, simultaneously lift up the battery pack.

- (i) This button will have a 2 by it.

## Step 3 — Lower Case

● Using the Phillips #1 screwdriver, remove the eleven 2.5mm screws.

## Step 4

● Remove the one 2.5mm Phillips #1 middle plate screw.

This document was generated on 2020-11-28 08:23:37 AM (MST).

## Step 5

- Lift up the middle vent panel.

- Set the panel to the side.

## Step 6

- Using the plastic opening tool, remove the outer panel and set to the side.

⚠ Be careful not to break the back of the computer.

To reassemble your device, follow these instructions in reverse order.
