## INTRODUCTION

This guide will help you remove a key from the keyboard of your Logitech G910 Keyboard and replace it with a new one. You will need a key cap remover however it is not required but many might find it easier to use a key cap remover.
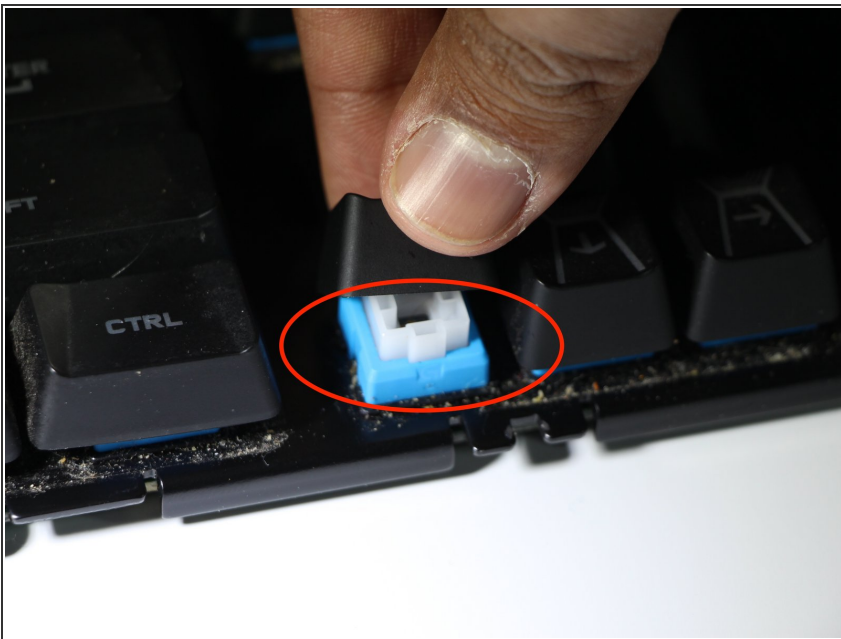

## 🔧 TOOLS:

- key cap remover (1)

    www.iFixit.com    

## Step 1 — Key

- Unplug the keyboards USB cord from the computer. This is to ensure it is powered off.

- Make sure the keyboard is facing up towards you and on a level and sturdy surface.

## Step 2

- Gently use your fingers to remove the key caps from the keyboard by firmly grasping the key and pulling directly up.

- Make sure the pins line up and it is facing the correct direction. Once you have done this, firmly push it in until you hear it click into place and works like normal again.

- ⓘ If the key cap doesn't push in all the way or won't pop back up from being pressed down then it is either in the wrong spot or oriented the wrong way. Pull it off, make sure no debris is blocking the pin hole and try putting it the correct way again.

To reassemble your device, follow these instructions in reverse order.
