INTRODUCTION

If your mousepad is working incorrectly, refer to this page's troubleshooting guide. This fix is only necessary after you have attempted the prerequisite fixes.

🔧 **TOOLS:**

Tweezers (1)
Metal Spudger (1)
Phillips #0 Screwdriver (1)
Phillips #00 Screwdriver (1)
JIS #1 (1)

⚙️ **PARTS:**

Dell Inspiron 11 Mousepad (1)
**Dell Inspiron 14z 5423 Mousepad**

Step 1 — Mousepad

- Place laptop upside down to observe the first set of screws on the bottom cover. With the J1 Phillips head screwdriver bit, unscrew eight (8) size 60 mm screws.

- With a metal spudger, remove the plastic cover to unveil the final screw.

- With the J1 Phillips head bit, remove remaining 60 mm screw.
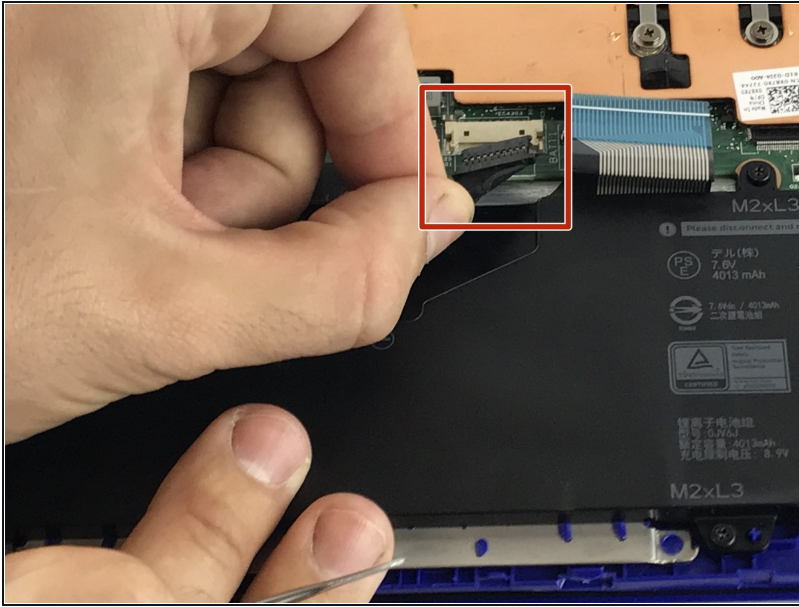

Step 2

- With a metal spudger, pry apart the bottom cover working around the edges.

- (i) While separating the halves of the bottom cover, carefully move the spudger up and down to avoid damaging the USB/Audio circuit board cable inside.

- With [tweezers](), disconnect the USB/Audio circuit board cable.

- Place the bottom cover off to the side.

Step 3

- With the J1 screwdriver bit, unscrew three (3) size 40 mm battery screws.

Step 4

- With tweezers, disconnect the battery cable.

- Remove the battery pack.

Step 5

- With tweezers, disconnect the keyboard cable

- With tweezers, disconnect the touchpad cable.

- With the Philips #00 Screwdriver, loosen the 4 - M2 x 2mm screws

- Gently remove the mouse touchpad.

To reassemble your device, follow these instructions in reverse order.
