INTRODUCTION

Sometimes cables can get in the way of the internal fan and will grind against it creating a moderate clicking sound. This guide will show how to get rid of that noise.

🔧 TOOLS:

- Phillips #2 Screwdriver (1)
- Metal Spudger (1)
- Phillips #0 Screwdriver (1)

## Step 1 — How to Get Rid of Fan Clicking Noises on a Toshiba TDP-XP2

- Start by removing the two screws on the bottom of the device as shown.
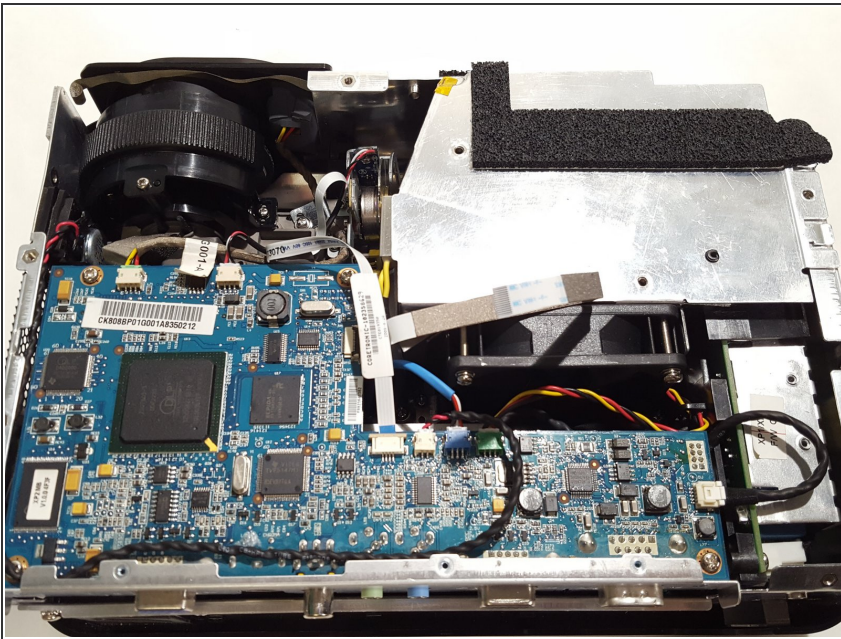

Step 2

- Remove the top plastic cover from the device. The back is snapped on so it would help to have leverage from a prying tool.

- Remove the ribbon cable attached to the plastic piece just removed. Remember its orientation for re-assembling later.

Step 3

- Unscrew the screws from the metal shielding to remove it.

Step 4

- Move any wires out of the way of the fan so they won't grind up on it during operation.

- If the cables do not stay out of the way, tape them down away from the fan.

To reassemble your device, follow these instructions in reverse order.
