

# How to Install a 2.5" SSD Into a Silicone Enclosure

How to install a 2.5" SSD into a silicone enclosure sold by iFixit.

Written By: Arthur Shi

# INTRODUCTION

Follow this guide to install a 2.5" SSD into a silicone enclosure sold by iFixit.

## Step 1 — Insert the SSD into the enclosure

- Before you insert the new hard drive, note the orientation of the SATA connectors embedded in the enclosure:
  - The wide power SATA port
  - The narrower data SATA port

## Step 2

- Using the previous step, orient the new drive so that its SATA connectors will align with the enclosure's.
- Slide the drive into the enclosure's opening.
- Push the drive into the enclosure until it stops sliding and the SATA connectors are completely seated.

## Step 3

- Stretch the remaining enclosure corners over the drive so that the silicone cover encapsulates the drive.

Your drive is ready to be used!
