Step 1 — Clock Battery

⚠️ This is not reversible and your camera will look like this forever after snapping off the plastic clip.

● Unfortunately I don't have a before picture, but the battery is under a plastic cover that you have to snap off.

● I did not take the 2nd picture, but it is an example of what it looks like here before breaking the plastic. Source:

   ● [Replacing internal backup battery of Canon EOS Rebel T3i camera](#)

Step 2

- Can use thin flat-head screwdriver or tweezers to pry off the cover and reveal the battery slot.

Step 3

- Can now see the battery and any model numbers on it. On my camera it is labeled "MS614SE"

- Use a thin flat-head screwdriver or your tweezers to get the old battery out.

- Slide in the new one and push it in with your finger.
