

India Mark III Chain Replacement

Prerequisite guide to disconnect the chain.

Written By: Andrew Optimus Goldheart

INTRODUCTION

Prereq only.

TOOLS:

- [Angled Socket Wrench](#) (1)
-

Step 1 — Chain

- Place the spacer collar around the pump rod below the raised chain, with the beveled side down, and the flat side facing up.

Step 2

 The following procedure requires two people. If you attempt to do this alone, you risk injuring yourself and damaging the pump.

- Lift the pump handle until the base of the chain comes to rest on the spacer collar, and the chain is slack. Hold the handle in this position while the chain is being detached.

Step 3

- Using the two access holes, place an angled socket wrench on the bolt and nut attaching the chain to the pump handle.

Step 4

- Hold the wrench on the bolt stationary.
- Loosen the nut.

Step 5

- Remove the nut from the chain bolt.

Step 6

- Remove the washer from the chain bolt.

Step 7

- Remove the chain bolt.

Step 8

- Pull the top of the chain straight off of the pump handle.

To reassemble your device, follow these instructions in reverse order.
