Step 1 — Battery

- Push in release lever towards top of phone, then use blue spudger to pry case off.

- After case is removed from the back of the phone, you can simply use your hands to take it the rest of the way off.
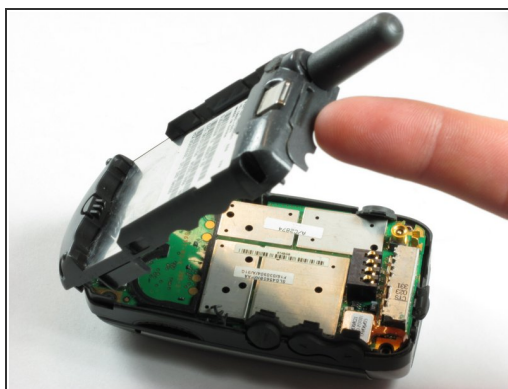

- Set cover aside in a safe location.

Step 2

- Carefully grab battery towards bottom of phone.

- Lift from bottom and take out of phone, set aside in a safe location.

Step 3 — Logic Board

- Unscrew four corner screws with T6 screwdriver.
  - Note: The two top screws are short and silver. The two bottom screws are black and long.
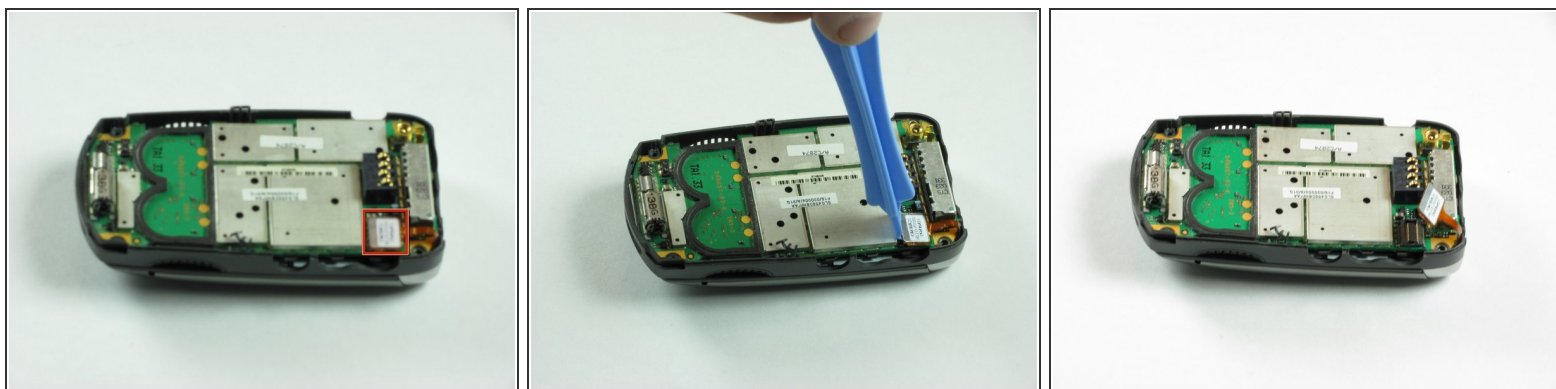

Step 4

- Use a spudger to gently pry off back chassis. Wedge the spudger in crevice between back panel and phone and lift.

Step 5

- Starting from left side of phone, remove side buttons and place aside.
  - Note: There should be three buttons. One on each side, and the top.
- Return phone to starting orientation when done.

Step 6

- Gently remove orange ribbon cable by prying up with spudger.

Step 7

- Use a spudger to pry up logic board by wedging in between logic board and chassis and lifting.
  - Note: Orange ribbon cable is fragile and can be broken.

To reassemble your device, follow these instructions in reverse order.
