

# Replacing bObsweep Standard or Pethair's Bumper Sensors Replacement

How to remove the sensors which tell bOb when he touches walls or obstacles and install new ones.

Written By: Tatiana

## INTRODUCTION

The bumper sensors on bObsweep Standard and Pethair models are essential in directing movements and determining Bob's distance from obstacles.

### TOOLS:

- [Phillips #2 Screwdriver](#) (1)

## Step 1 — bObsweep's cover

- Flip Bob over and remove the 7 screws around which hold the cover together.
  - Remove the main brush. Unscrew the holder, and lift the brush out. Reminder: Keep this screw separate from the others so you can use it later to reinstall.
- ⓘ Depending on your model, there may be only 6 screws installed on bObsweep.

## Step 2

- There are two screw holes inside the brush compartment: one in the centre, one on the left end. Remove both and keep aside for reassembly.
- There are five more screws around bObsweep's edges. Two are installed at the top and bottom, and one on the right end of the main brush.

### Step 3

- Flip bOb back over so you can see the screen. Lift the cover up to reveal bObsweep's main board.
- Detach the power inlet from the cover. Grip and slide it out.

## Step 4

- Remove three circuit plugs from the motherboard. Pinch the small white tab on the side of each circuit plug and pull straight up to release each from the motherboard.
  - 1. On the bottom left corner: a small connector with red, black and white wires.
  - 2. One thick white wire that attaches on the right side of the previous connector.
  - 3. On the top edge of bOb's motherboard: a wide multicoloured connector.
- Place the cover aside and begin your repair.

## Step 5 — Bumper Sensors

- There are two sensors that touch the inside of bOb's bumper wired to one another as well as one circuit plug.
- To remove these , uninstall the two screws holding them in place. Then, lift each sensor up.

## Step 6

- Place your new sensors in the open spaces.
- Make sure you place the sensor with the red wire on the left side when bOb's cover is upside down.
- The black wired sensor should be on the right side during the repair.
- Replace the screws in the innermost holes. Then follow the guide for [Closing bObsweep's cover after repair](#)

To reassemble your device, follow these instructions in: [Closing bObsweep's cover after repair](#)
