

Amazon Echo Tweeter Assembly Replacement

Replace the tweeter assembly in the Amazon Echo.

Written By: Alexander Albert

INTRODUCTION

This guide demonstrates how to replace the tweeter assembly in the Amazon Echo. Removing the assembly is a prerequisite for replacing the tweeter or woofer.

TOOLS:

- [Heavy-Duty Spudger](#) (1)
 - [T10 Torx Screwdriver](#) (1)
-

Step 1 — Power and Speaker Driver Board

⚠ Power off and unplug your Echo before disassembly. Failure to do so could result in injury or damage to the device.

- Peel off the rubber footing from the bottom of the Echo.

⚠ Do not pull the rubber footing too hard, as it could stretch out of shape. Use a spudger to help remove the foot if you have any trouble.

Step 2

- Remove the four 42.8 mm T10 Torx screws from the bottom of the Echo.

Step 3

- Slowly lift the plate containing the board. Be careful not to disconnect any of the wires.

Step 4

- Using tweezers, carefully disconnect the two red and black cables from their sockets on the board.
- ⚠ Tugging on the wires may damage the device. Pull from the plastic connectors instead.

Step 5

- Lift the brown plastic latch on the ZIF connector securing the driver board ribbon cable.
- Pull the ribbon cable from its connector. The plate and board should now be free from the Echo.

Step 6

- Using the spudger, pull back the two plastic clips on the plate.
- Lift the board up and pull it away from the plate.

Step 7 — Tweeter Assembly

- Remove the plastic plate from the bottom of the device. Then remove the plastic shrouding.

Step 8

- Peel off the black fabric wrapped around the Echo.
 - ⚠ Be careful not to rip the fabric. Use a spudger to help remove the adhesive if you have any trouble.

Step 9

- Remove the four 42.8 mm T10 Torx screws around the tweeter.
- Lift the tweeter and its attached housing from the device.

To reassemble your device, follow these instructions in reverse order.
