INTRODUCTION

A two-way zip (two sliders for opening the zip from either the top or the bottom) can sometimes create a split zip where the teeth no longer align with each other. We'll show you how to fix this in just a few easy steps.

TOOLS:

- [Seam Ripper](#) (1)
-

Step 1 — Two-way zip slider

- Carefully open the zip using the seam ripper.

Step 2

- Guide the slider back onto the end of the zip.
- ⓘ Pull the lower slider up a bit so that there's an "opening" between the two sliders.

Step 3

- With a small jerk, pull the upper zip slider downwards.
